GENERAL INFORMATION

LISTINGS

All listings in this catalog supersede previous listings on the same material, and are subject to change without notice.

CATALOG NUMBERS

We urge the use of catalog numbers in writing orders.

WEIGHTS

The weights given in this catalog are not guaranteed but have been carefully estimated and should be sufficient for general purposes.

TERMS

To parties of approved credit are net thirty days or subject to cash discounts 10 days from date of invoice in Chicago or New York funds. Orders from parties unknown to us should be accompanied with cash, or a statement of financial condition, and with references.

C. O. D. ORDERS

We prefer not to make C. O. D. shipments. Orders from parties unknown to us, or without established credit rating, should be accompanied with New York or Chicago funds.

ROUTING

Please state on all orders whether same are to be shipped by freight or express, and which line is preferred. In the absence of instructions, we will use our own judgment as to the best routing.

CLAIMS

All packing is done with great care and we cannot be held responsible for loss of or damage to material in transit.

Claims for loss or damage should be made to the transportation company immediately, and if promptly notified we will lend all possible assistance in securing satisfactory adjustment. Claims for discrepancies, unless made within ten days after receipt of material, will not be considered, and such claims should be accompanied by packing memorandum.

RETURNED GOODS

Material shipped as ordered cannot be returned except by permission and subject to a reasonable service charge.

Tools are not sent on approval and are not returnable for credit.

Boxes specially drilled or tapped are not returnable for credit.

MINIMUM CHARGE

Owing to the increased cost of handling and billing small orders, a minimum charge of \$1.00 will be made on all orders which do not net that amount.

AUSTIN

*** AUSTIN New 4-Inch Octagonal Concrete Boxes**With a combination of $\frac{1}{2}$ " and $\frac{3}{4}$ " knockouts**A Knockout the Size You Want and Where You Want It Saves Time, Labor and Material. This New "AUSTIN" Box Has It.**

This New Box provides a better installation and does the work cheaper with a saving in time, labor and material. Think how much time is saved when reaming is eliminated and expensive knockout reducers abolished. Any combination for $\frac{1}{2}$ " or $\frac{3}{4}$ " conduit is easily obtained, merely by setting the box in the desired position. The box provides plenty of inside wiring room and after tapping the wires and assorting the circuits, they can be easily placed inside the box without jamming them in with a hammer which often causes electrical defects, to say nothing about the loss of time.

The Box

The box is octagonal, having equal sides, with a $\frac{1}{2}$ " or $\frac{3}{4}$ " knockout in each, so arranged that the box can be set to provide any combination. It is 4" in diameter and furnished in depths from 2" to 6" inclusive. We recommend the use of 3" or deeper boxes as these depths will allow more concrete between the forms and the conduit system. Each side is $1\frac{5}{8}$ " wide, thereby providing plenty of room for the locknut and bushing, which fit snugly, leaving no opening into which concrete can enter. The inside ears will take any standard make of 4" box cover. (Austin No. 7900 Series of Covers.) Can be furnished with 1" knockouts but sketch showing position must accompany order.

The Plate

The round plate is $4\frac{1}{2}$ " in diameter and when fastened to the box projects beyond the outer wall, which positively prevents the concrete from entering, and also serves as an anchor, supporting the box independent of the conduit system. The fastening ears, which are riveted into place and set back in the box, enable the plate to be drawn up tight against the mouth of the box. The plate has $3-\frac{1}{2}$ " and $2-\frac{3}{4}$ " knockouts. Four holes are provided to take any standard fixture stud, although we recommend the use of the Austin solid type No-Bolt Stud, which is easier to install and which cannot work loose from vibration.

If desired plates can be furnished with $\frac{3}{8}$ or $\frac{1}{2}$ " studs attached.

Diagram of Size and Position of Knockouts

Note the location of the knockouts, making it possible to provide elbows, tees, crosses, etc., in any combination for $\frac{1}{2}$ and $\frac{3}{4}$ -inch conduits. The flexibility of this box eliminates the expensive necessity of reaming or reducing the knockouts, as the box can be set to cover all practical requirements.

*Galvanized finish should be used on all concrete work so as to bond with the concrete. Galvanized finish will therefore be furnished on all orders.

No. 733
 $\frac{1}{2}$ " Deep, $3\frac{1}{2}$ " Diameter,
 $\frac{3}{8}$ " Fixture Stud; Four $\frac{5}{8}$ " K. O.
 One Clamp

AUSTIN DUO-BOXES are made of steel thoroughly galvanized. Nos. 730 and 731 are for use with Armored Cable and Flexible Non-Metallic Conduit (Loom.) One box for double duty reduces investment one-half, saves time and labor. When used with Armored Cable, Box Connectors or Terminal Fittings are eliminated, as the Bushing Plates positively protect the insulation of the wires.

Shallow Box No. 733, $\frac{1}{2}$ " deep, is furnished complete with one clamp, suitable for loom as is furnished, but when used with Armored Cable, terminal fittings (see Austin Spiralbush) must be attached to the cable to protect the insulation of the wire and to comply with the Electrical Code.

For New Work DUO-BOXES Furnished with Bar Hangers

No. H 730—A No. 730 Box with Straight Bar Hanger

No. HS 731—A No. 731 Box with Shallow Offset Bar Hanger

For new work Austin Duo-Boxes can be furnished with bar hanger so that it is only necessary to nail the bar to the joist or studding and the job is done. Saves lost time in finding wood backings and mounting them.

AUSTIN "Solid Type" Cable Boxes

Straight Electric or Combination Gas and Electric

AUSTIN "Solid Type" Cable Boxes are made in two styles. No. 42 for straight electric work having a solid stud, No. 52 for combination gas and electric work. They are of the approved style, having deep sides classifying them as a box and not a plate.

By using these boxes you save the price of a box, cover, two or more box connectors and a fixture stud. It is furnished with four "wedge type" openings which will take all armored cables whose outside diameter is $2\frac{1}{32}$ " or smaller. Enameled finish. Made of malleable iron.

* AUSTIN ALL-IN-ONE BOXES

AUSTIN PATENTED BAR HANGERS NOW ASSEMBLED COMPLETE WITH OUTLET BOXES

With these new AUSTIN "All-in-One" Boxes simply nail the bar hanger to joist and the job is complete. You then have an outlet box, fixture stud and support all in one. Think of the old-fashioned expensive method of using wood blocks, fitting, sawing and nailing them in place, drilling holes in the bottom and then fastening outlet box into position. The bar hanger will fit any joist on 18" centers or less.

THE M. B. AUSTIN COMPANY

CHICAGO, ILL.

AUSTIN

The Austin Line

AUSTIN

AUSTIN Patented Bar Hangers

U. S. Pat. No. 1056498—March 18, 1913

Imitations and infringements are never as good as the original and genuine. The popularity of the original Austin Bar Hangers has resulted in numerous substitutes but Austin remains the best, the most economical to install and the leader. The line is complete with a specially designed bar for every form of construction. Austin Bar Hangers provide a quick and economical means of rigidly mounting any type of outlet box for new work. They are complete in

themselves and no extra parts necessary. The sliding Austin Fixture Stud also acts as the box support which makes it possible to set and lock the box at any desired position on the bar. The standard has a $\frac{3}{8}$ " stud but $\frac{1}{2}$ " studs may be had if desired. If you want the best then insist upon Austin Bar Hangers protected by U. S. Patent No. 1056498 of March 18, 1913.

NO. 900 STRAIGHT
BAR HANGER AND STUDFor Ceiling Plates and Concrete
Work

The Straight Bar Hanger and Stud is designed for use with any shallow type outlet box. The mouth of the box is always brought flush with the plaster line. Simply break out the center knock-out, place through it the sliding fixture stud and run up the locknut. The stud is slotted allowing free movement on the bar that may be easily tightened by the locknut at any selected place making it possible to set the box at any desired spot. The ends of the

bar are notched so that the sliding fixture stud cannot become separated from the bar and lost. Plenty of nail holes are provided so that any adjustment is easily obtained. This bar is also used for concrete work by nailing the bar to the form, holding the box in place while the concrete is poured. The standard bar is 18" long, although 24" bars can be furnished by specifying catalog No. 900-A.

NO. 905 SHALLOW
OFFSET BAR HANGER
AND STUDFor $1\frac{1}{2}$ inch Deep Boxes
Without Plaster Cover

The Shallow Offset Bar Hanger and Stud will take any standard $1\frac{1}{2}$ " deep outlet box where covers are not installed. The depth of the offset is exactly right for $1\frac{1}{2}$ " or $1\frac{3}{4}$ " boxes and brings the surface of the box flush with the plaster line. The little sliding fixture stud permits the box to be adjusted at any desired location. The offset in the bar has been made shorter to permit

easier use on side wall outlets particularly in brick walls where it will not be necessary to cut out as much brick as for the old length offset. The bar, however, will give the same range of adjustment allowing the box to be set in any desired location. Length of bar $19\frac{1}{2}$ inches.

NO. 915 DEEP
OFFSET BAR HANGER
AND STUDFor $1\frac{1}{2}$ inch Deep Boxes
With Plaster Cover

The Deep Offset Bar Hanger and Stud will take all $1\frac{1}{2}$ " deep standard outlet boxes with plaster cover. Fitting is unnecessary. Just nail the bar to the joist as the offset is exactly right to bring the plaster cover flush with the

plaster line. Made with a shorter offset the same as on the No. 905. Length of bar $19\frac{1}{2}$ inches.

NO. 920 OLD WORK
HANGER AND STUD

For Old House Wiring

The Old Work Bar Hanger has an automatic sliding stud so that it is only necessary to open plaster sufficiently to permit the stud passing through. The stud is then placed at the end of the bar and the complete outfit slipped through the hole. The wire leader which is firmly fastened to the notch at the center

of the bar is drawn through the stud which remains stationary and so centers the bar into position. The box is then held in place by simply tightening the locknut. Length of bar 12".

NO. 910 UNIVERSAL
BOX CLEATFor Switch and Receptacle
Outlets With $1\frac{1}{2}$ inch Deep
Boxes

The Universal Box Cleat is designed especially for switch outlets and is therefore furnished without the sliding fixture stud. It is so arranged that switch box can be installed close to joist but can be reversed where different spacing is desired. The offset allows proper space for $1\frac{1}{2}$ " deep boxes with

cover. The offset portion is provided with two slots for stove bolts to hold the box. The bar is 21" long having plenty of nail holes so that the box can be set at any desired location.

THE M. B. AUSTIN COMPANY

CHICAGO, ILL.

AUSTIN*The Austin Line***AUSTIN****AUSTIN No. 100 Floor Box**

This box has proven the most popular on the market. Where an adjustable box is unnecessary or where the conduits are not over $\frac{1}{2}$ inch, it has no equal. Each box is drilled and tapped for four $\frac{1}{2}$ -inch conduits, but brass plugs are furnished so that holes not in use can be hermetically sealed.

Boxes are galvanized inside and out, and the nozzle is of such size that receptacle cap can be removed without the use of tools.

Catalog No.	DESCRIPTION	Standard Package	Weight, Lbs. Each	List Price Each
100	Box complete as per cut.....	\$100.00 List Value	2 1/2	\$4.00
101	Iron Box with three plugs only.....		1 1/8	.85

Drilling, Tapping and Gaskets, extra.
Finish—Cast Iron Boxes carried only in Japanned finish.
Galvanizing, extra.

Drilling and Tapping

In sending orders for cast iron boxes, it is necessary to specify whether drilled holes or drilled and tapped holes are required, and a sketch showing the drilling should accompany orders. When drilling is to be at any particular height in box, this must be specified.

Make a sketch similar to cross as though sides were laid flat and then place a circle at point drilling is desired. In specifying size of hole we will understand that conduit dimensions are desired. A one-inch hole indicated will be taken to mean that hole is to take one-inch conduit. Conduit measurement is for nominal inside diameter.

Drilling and Tapping will be charged extra. Estimates furnished upon definite specifications.

Orders for Boxes having a list value of \$50.00 will be considered as entitling purchaser to standard package price.

AUSTIN Switch Boxes

National Electric Code Standard

Type "L" Box

Type "L" Box, Sides Removed

Type "L" Box Assemble in Two Gang

Type "LC" Box

Type "LS-1" Box

AUSTIN Type "L" Sectional Switch Box

For Flexible Non-Metallic Conduit (Loom)

Type "L" Sectional Switch Box, for non-metallic flexible conduit, has beveled corners which permit installation of this box into the smallest practical opening in the wall, as well as facilitating the fishing of flexible conduit into the box. Both sides are removable and when assembled into gangs no partition is left between boxes, and the entire interior is, therefore, left available for easy wiring and mounting of switches or receptacles.

Boxes can be ordered complete but units or spacers may be ordered so that complete boxes can be assembled from the surplus stock of sides which may be left in making gangs.

Boxes are furnished with galvanized reversible, sliding ears, which have an adjustment of $\frac{1}{2}$ -inch up to $\frac{3}{4}$ -inch, suitable for both old or new work. Can be ordered complete with loom clamps, but same must be specifically stated on order and specified Type "LC."

Catalog No.	DESCRIPTION	Unit Package	Std. Package	Wt. Lbs. per 100	List Price per 100

AUSTIN Type "LS" Solid Drawn Switch Box

For Flexible Non-Metallic Conduit (Loom)

Type "LS" boxes for non-metallic conduit. Are particularly designed for contractors who prefer a solid unit box for a single, two-gang or three-gang switch installation in old or new work. These boxes are drawn from 14-gauge steel and are equipped with beveled corners to facilitate the fishing of flexible conduit into box as well as permitting installation of the box into the smallest practical opening in the wall. Boxes are furnished with galvanized reversible, sliding ears, which have an adjustment of $\frac{1}{2}$ -inch to $\frac{3}{4}$ -inch, suitable for both old or new work.

These boxes can be furnished with inside clamps for non-metallic conduit, but boxes so ordered must be so specified.

Catalog No.	DESCRIPTION	Unit Package	Std. Package	Wt. Lbs. per 100	List Price per 100
"LS-1"	Single-gang Box: Depth $2\frac{1}{4}$ ", Length 3", Width 2". K. O. $\frac{5}{8}$ ", two in each side and two in each beveled corner for non-metallic conduit. Reversible, adjustable ears. No clamps.	10	100	69	\$25.00
"LS-2"	Two-gang Box: Depth $2\frac{1}{4}$ ", Length 3", Width $3\frac{3}{4}$ ". K. O. $\frac{5}{8}$ ", two in each side and four in each beveled corner, for non-metallic conduit. Reversible, adjustable ears. No clamps.	5	50	108	45.00
"LS-3"	Three-gang Box: Depth $2\frac{1}{4}$ ", Length 3", Width $5\frac{1}{2}$ ". K. O. $\frac{5}{8}$ ", two in each side and six in each beveled corner, for non-metallic conduit. Reversible, adjustable ears. No clamps.	1	40	140	65.00

FINISH: A rich, glass-like, baked enamel finish has been adopted as standard for Austin Switch Boxes, although galvanized finish can be had if desired at a slight increase in price. Enamel finish will be furnished unless otherwise specified on order.

AUSTIN Switch Boxes

National Electric Code Standard

AUSTIN Type "CS," and "C" Sectional Switch Box
For Rigid Conduit

Type "CS" and "C" Sectional Switch Boxes are furnished with $\frac{1}{2}$ -inch conduit knockouts and are, therefore, adapted to $\frac{1}{2}$ -inch rigid or flexible metallic conduit. It may also be used for 2-conductor No. 14 steel armored cable by using a $\frac{3}{8}$ -inch box connector, as listed on pages 24 & 25.

This box has square corners. Both sides are removable, and when assembled into gangs no partition is left between boxes, and the entire interior is, therefore, left available for easy wiring and mounting of switches or receptacles. Box can be ordered complete, but units or spacers may be ordered so that complete boxes can be assembled from the surplus stock of sides which may be left in making gangs.

Boxes are furnished with galvanized reversible sliding ears which have an adjustment of $\frac{1}{2}$ -inch up to $\frac{3}{4}$ -inch, suitable for both old or new work.

AUSTIN Type "BXS," and "BX" Sectional Switch Box

For Steel Armored Cables

Type "BXS" and "BX" Sectional Switch Boxes are provided with $\frac{3}{8}$ -inch knockouts to accommodate Nos. 10, 12 and 14 B & S twin conductors, and Nos. 12 and 14 B & S triple conductors, flexible armored cable; also $\frac{1}{2}$ -inch and $\frac{3}{8}$ -inch flexible metallic conduit. They are furnished complete with inside clamps as shown in illustration. Square corners. Both sides are removable and when assembled into gangs no partition is left between boxes, and the entire interior is, therefore, left available for easy wiring and mounting of switches or receptacles.

Box can be ordered complete, but units or spacers may be ordered so that complete boxes can be assembled from the surplus stock of sides which may be left in making gangs.

Boxes are furnished with galvanized, reversible sliding ears, which have an adjustment of $\frac{1}{2}$ -inch up to $\frac{3}{4}$ -inch, suitable for both old or new work.

AUSTIN Type "RC" Sectional Switch Box

Old Catalog Number 1170

For Rigid Iron Conduit, Flexible Metallic and Non-Metallic Conduit

Type "RC" Sectional Switch Box remains the same in design as the old Austin No. 1170. A combination box for flexible metallic and non-metallic conduit and rigid iron conduit. It is an extremely shallow box, particularly adapted for thin partitions and outside wall work. It has square corners and only one side is removable, and, therefore, the spacer "RC-S" must be used in assembling gangs for three or more switches or receptacles.

Catalog No.	DESCRIPTION	Unit Package	Standard Package	Wt., Lbs. per 100	List Price per 100
"RC" Box Old No. 1170	Single gang Box. Depth, 1 $\frac{1}{2}$ "; Length, 4"; Width, 2". K. O. one in each end and two in bottom, for $\frac{1}{2}$ " rigid or flexible conduit; two in each side for flexible non-metallic conduit or $\frac{3}{8}$ " flexible metallic conduit or armored cable. Square corners. Not provided with external supporting ears. Has one mounting hole in bottom.	10	100	75	\$30.00
"RC-2" Box—Old No. 1170-2	Two-gang Box. This two-gang box is built up from the "RC" box and spacer, providing proper distance between the sides. Screw centers $3\frac{1}{2}$ ".	10	50	108	50.00
"RC-S" Spacer—Old No. 1170-S	Spacer. Depth, 1 $\frac{1}{2}$ "; Length, 4"; Width, 1 $\frac{1}{8}$ ". This width allows correct spacing for push button switches. K. O. one in each end and two in bottom for $\frac{1}{2}$ " rigid or flexible metallic conduit. By adding these spacers any number of gangs can be obtained. Square corners.	10	100	40	20.00

FINISH: A rich, glass-like baked enamel finish has been adopted as standard for Austin Switch Boxes, although galvanized finish can be had if desired at a slight increase in price. Enamel finish will be furnished unless otherwise specified on order.

AUSTIN Switch Boxes

National Electric Code Standard

AUSTIN Type "SC" Shallow Sectional Switch Box

For Rigid Conduit

Type "SC" Box

The New Austin Type "SC" Sectional Switch Box for rigid conduit is extremely shallow, being particularly designed to take the new line of shallow switches and receptacles. It is only 1½" deep by 3⅝" long by 2" wide and is equipped with ½" knockouts at each end for ½" rigid or flexible metallic conduit. It may also be used for 2-conductor No. 14 steel armored cable by using a ⅝" box connector, as listed on pages 24 and 25.

This box has square corners. Both sides are removable, and when assembled into gangs no partition is left between boxes, and the entire interior is, therefore, left available for easy wiring and mounting of switches or receptacles.

Box can be ordered complete, but units or spacers may be ordered so that complete boxes can be assembled from the surplus stock of sides which may be left in making gangs.

"SC" Unit	Unit or Spacer. A type "SC" Box without sides.	10	100	30	20.00

Type "T" Box

AUSTIN Type "T" Tandem Switch Box

For Flexible Non-Metallic Conduit (Loom)—Rigid Conduit—Steel Armored Cables

The "T" Tandem Switch Boxes are made for Flexible Non-Metallic Conduit (Loom) Rigid Conduit and Steel Armored Cable. The general Tandem type is vertical but these can be also made in Tandem Parallel type to suit any requirement. When ordering Tandem boxes it is suggested that a rough sketch as to how the boxes are to be mounted be attached to the order to eliminate mistakes and errors. These boxes will mount all standard push button switches or receptacles and will accommodate all standard plates. Boxes up to 5-gang are made with solid sides with no partitions between switches and a sufficient number of knockouts is provided in sides for all practical uses. Multiple Tandem box can be built up by combining the regular gang boxes and riveting them together. This feature is particularly desirable where a large number of switches or receptacles are to be concentrated in one location, as a more rigid fitting is provided. Boxes are furnished with galvanized reversible sliding ears which have an adjustment of ¼" up to ¾" suitable both for old or new work.

AUSTIN B. G. Switch Box Support and Lath Holder

NOTE THE LOCK
B. G. Lath Holders are locked firmly into the support bars.

A Good Strong Rigid Support for Any Standard Switch Box

B. G. Supports, because of the rolled feature, are stronger and more rigid than similar devices

Use any ordinary standard Switch Box (A). Lay it face up. Place the two supporting bars (B) on the ears of the box. Slide the locking lath holders (C) up to the box (A), making a firm unit that is positively **locked** in place and cannot come apart accidentally.

The box is easily adjusted to any desired location along the bar, but when nailed to the studding, the supporting bars **lock** the Switch Box and Lath Holders firmly into place. Vibration of the building or rough handling by building trades will not throw it out of alignment. It's up for good because it's **locked** to stay.

An **exclusive** feature of the Lath Holders is that it will permit two laths of standard or bastard type with sufficient room to key the plaster. Plenty of nail holes conveniently located, yet they do not weaken the support.

Approved by the Underwriters' Laboratories and enthusiastically indorsed by various Bureaus of Electrical Inspection.

Catalog No.	DESCRIPTION	Length of Bars	Unit Package	Standard Package	Weight Lbs. per 100 Sets	List Price per 100 Sets

AUSTIN Switch Boxes with Lath Support and Mounting Bracket

TYPE "BXS" & "BXS" For Armored Cables with Inside Cable Clamps

TYPE "LB" Without Clamps TYPE "LCB" with Clamps for Flexible Non-Metallic Conduit (Loom)

TYPE "CS" & "C" for Rigid Conduit and Flexible Steel Conduit 1/2" Knockouts

TYPE "480B" & "481B" Solid Drawn for Rigid Conduit and Flexible Steel Conduit 1/2" K. O.

A Single Unit that Provides Switch Box, Lath Holder and Support

With the new Austin Switch Box Lath Support and Mounting Bracket it becomes a single unit that provides a quick, economical means of support and one that will always bring the outlet a uniform distance from the door jamb and flush with the plaster line. Simply nail the bracket to the joist and the job is complete. The bracket is perforated so as to key the plaster; the lath support is highly desirable and is now required by many local inspection departments.

Units are used to build up two or more gangs

The gangable or sectional type boxes enables a single switch box to be converted into any number of gangs by simply removing the sides and inserting units or spacers. Units for these boxes with lath support and mounting bracket are the same in size, etc., as our standard units listed on preceding pages.

AUSTIN Locktite Switch Box with Lath Holders and Supporting Bars

Patent Applied For

HERE is the real thing in Switch Box, Lath Holder and Support—"LOCKTITE"—complete in three pieces. The Lath supports are a part of the box. The LOCKTITE Box, four nails and a couple of minutes complete the installation. Easy, free adjustment anywhere between the studding. No spring, no bending, no sagging, the steel supporting bars are nailed clear across the studding and lock the box securely at four corners, overcoming all the objection to other types. If the box is to be mounted in the horizontal position such as is often the case with base board receptacle outlets it is easy to do with Austin Locktite Boxes. Simply break off the hooks at the ends of the lath holders with pliers. Then bend the lower part of the lath holders towards the mouth of the box. You are now ready to mount the box. This is done in the same easy way as shown in illustrations below except that you set the box in the horizontal position and place the lower part of the lath holders into the bars. You will note the lath holder wedges against the bars and holds the box securely in place.

Approved everywhere in any number of gangs

"LOCKTITE" Boxes will pass inspection everywhere in any number of gangs and are not dependent on the laths for support. They support the laths as well as the box. Approved

by Underwriters' Laboratories, Inc., and enthusiastically endorsed by Local Inspection Departments.

Units are used to build up two or more gangs

"LOCKTITE" Boxes are ganged together into any number in the same easy, simple way as are all AUSTIN Switch Boxes. Nos. "LXT" and "CCT" are not gangable. They are made of solid stamped steel with sides riveted to the box. They are made larger allowing plenty of wiring room. The receiving

ears are bent in so that they are not covered over by the plasterer.

The Box is Supported and Locked at the Four Corners in Any Number of Gangs

AUSTIN Bushings and Locknuts

National Electric Code Standard

Not only are Austin Bushings and Locknuts "made-right," but "packed-right" as well.

Clean shelves with orderly stocks of Fittings and Wiring Devices are more than a convenience to Jobbers, Dealers and Contractors.

Goods in standard packages and convenient quantities are easily handled, easily accounted for, and remain in good condition no matter how long they stay on the shelves before using.

Fittings "made-right" deserve to be delivered into the users' hands in good condition.

Austin Fittings are made to a high standard and as a final detail of perfection they are packed in convenient quantities in unit and standard packages, which insure their receipt in good condition.

AUSTIN Malleable Bushings

Austin Bushings are made of the best malleable iron, are thoroughly galvanized, have long clean-cut threads, the best finger grips, and are heavy enough to permit tightening with a pipe wrench when desired.

The Austin Grip
Malleable Bushing

"Best in all creation—
protects the insulation"

A distinctive feature of
Austin Locknuts is that they
are all straightened before
tapping so that our threads
are more perfect than other
makes.

AUSTIN Better Packed Box Connectors

For Flexible Steel Conduit and Steel Armored Conductors

National Electric Code Standard

Careful analysis of the contractor's average purchases of $\frac{3}{8}$ " box connectors prove that it is in multiples of 25.

Therefore, as an added convenience for the distributor, AUSTIN now packs No. 2053 $\frac{3}{8}$ " Squeeze Type and No. 4053 $\frac{3}{8}$ " Wedge Type box connectors in quantities of 25 to a neat, attractive, handy size carton.

Packed in this way it makes clean shelves of well-kept stocks, adds dignity to the line, encourages sales and eliminates broken packages which has always been expensive waste and loss of time and labor.

AUSTIN Popular Squeeze Type "Straight" Box Connector

Austin Squeeze Type Box Connectors have been made smaller so as to properly fit the new small size armored cables. They are very simple in design and the slotted openings allow the connector to be securely squeezed to the armored conductors. The threads are perfect and run clear up to the shoulder, which permits locking tightly to box and securing perfect ground. Thoroughly galvanized, put up in convenient size cartons. No. 2053— $\frac{3}{8}$ " packed in handy size cartons of 25.

AUSTIN Loxall "Straight" Box Connector

Very simple to install, and a few turns with the screw driver positively locks the armored cable so that it is securely held in place and will not work loose from vibration, etc. The inside opening is $\frac{11}{16}$ -inch and will, therefore, take all sizes armored conductors and flexible metallic conduits whose outside diameter is $\frac{11}{16}$ -inch or smaller. They are carefully galvanized and the clean-cut threads run up to the shoulder. Packed in attractive, convenient cartons of 100 each.

AUSTIN Wedge Type "Straight" Box Connector

The Austin "Wedge" Type Box Connector is a very simple and practical connector and one which is very easily installed. There are various names for this "Wedge" type connector, such as "set screw," "plane and screw," etc., but "Wedge" type seems to be the proper name because that is what actually happens. The set screw doesn't come directly against the armor but simply wedges between the wall of the connector and the armor of the cable. The inside opening is $\frac{5}{8}$ -inch and is, therefore, adapted to all armored cables and flexible metallic conduits of $\frac{5}{8}$ -inch outside diameter or smaller. Thoroughly galvanized, threaded clear up to the shoulder. Packed in attractive, convenient cartons of 100 each. No. 4053— $\frac{3}{8}$ " put up in handy size packs of 25.

*No locknut furnished. These connectors are threaded to fit standard $\frac{3}{8}$ -inch sockets.

THE M. B. AUSTIN COMPANY

CHICAGO, ILL.

New Improved AUSTIN SLIP-IN Box Connector

Patented Nov. 4, 1924

Entirely new in design and employing an easier principle of application, the New "AUSTIN" SLIP-IN becomes the wonder Box Connector—biggest advance in years.

Tighten the screw—that's all. No Locknut to back off and then tighten with pliers or wrench, no loose parts. To install simply tip Connector and slip into knockout, lay cable in place and then tighten the screw. This wedges the cable into Connector and Connector into box, providing a direct ground and a good, strong hold that cannot come apart.

The specially designed screw is made extra heavy, the threads are cut deeper and true to gauge to permit easy, free adjustment. The slot in the head is cut deep enough and large enough to take any size screw driver. The Connector can be placed in the knockout so that the screwhead is in the most convenient position for tightening.

Made of malleable iron, thoroughly galvanized. Fits into standard $\frac{1}{2}$ " conduit knockout and will take armored cables whose outside diameter is $\frac{9}{16}$ " or smaller. Packed in handy cartons of 50.

Catalog No.	Size	Diameter of Opening for Cable	Size K. O.	ADAPTED FOR (Based on Outside Diameter of Austin Safesteel Armored Cables)	Unit Package	Standard Package	Wt., Lbs. per 100	List Price per 100

AUSTIN Duplex Squeeze or Wedge Type Box Connector

No. 2253 Squeeze Type

No. 2254 Wedge Type

There is a big saving in time and labor and elimination of waste of material with the use of Austin Duplex Box Connectors. They allow two armored cables into the same knockout and thus save approximately 6 to 8 inches of cable, plus time and labor. No. 2253 Squeeze type with separate openings. No. 2254 wedge type with single opening. Thoroughly galvanized malleable iron with clean-cut threads running clear up to the shoulder. Extra heavy locknuts.

Combination Coupling

Side View

AUSTIN Squeeze Type Combination Couplings

The Austin Squeeze Type Combination Coupling permits connecting of flexible metallic conduit to rigid iron conduit. It can also be used with the popular Austin Conduit Nipple as shown on page 23 for connecting flexible metallic conduit to outlet boxes. Thoroughly galvanized, made in one piece and having long, clean-cut threads. Cannot pull apart.

"Spiralbush"

A Bushing for Armored Cable

The "Spiralbush" is a new bushing for Armored Cables and one that positively protects the insulation of the wire when it leaves the armor of the cable. The ruling that all flexible armored cable when entering unbushed outlet or junction boxes must be provided with an APPROVED TERMINAL FITTING opens a large field for this new Austin Bushing. The "Spiralbush" takes but a few seconds to install as the spiral is quickly screwed over the seam of the armor strip of the cable, thus giving a positive hold. It is not only the best on the market, but also the cheapest.

Minerallac Cable and Conduit Hangers

These hangers are made of the best spring steel and are much stronger than cast iron hangers for the same purpose.

They are easily and quickly put in place, and open wiring, conduit and cable may be run with greater rapidity and be more compactly arranged than by the use of any other hanger.

We are prepared to furnish all styles of these bushings for high tension work, properly designed to get the necessary insulation and dielectric and mechanical strength.

AUSTIN Capped Elbow

Austin capped elbow eliminates the fishing of wire through a sharp bend and allows the conduit to lie close to the surface. It permits a straight pull for drawing in the wires. The openings are bushed to prevent abrasion of the wires. Does away with large unsightly holes in wall. Ideal as a service elbow or any place where a sharp bend is desired. Absolutely weatherproof; made of malleable iron thoroughly galvanized.

AUSTIN Code Standard Adjustable Ground Clamps

Underwriters' Laboratories report No. 6220 covers the approval on the new Austin Adjustable Ground Clamps and, therefore, conform to all the code requirements. Made of heavy copper, having an easy, simple arrangement for soldering the ground wire. The large nut and bolt are copper plated and provide a perfect joint.

Austin Approved Adjustable Ground Clamps are made in three sizes, being adjustable in various ranges from $\frac{3}{8}$ " to 3" inclusive.

AUSTIN Tempered Steel Fish Tapes

Notice the New Handy Size Carton

Austin Fish Tape is made of the best flat tempered spring wire. The tempering prevents the tape from curling after constant use. The flat shape lends to its flexibility and makes it easy to fish the wire in long runs of conduit having several bends.

As an added advantage Austin Fish Tape is put up in coils in any assortment of lengths (multiples of 25 feet) and packed in individual cartons. This permits easy handling, storing and display.

The Little Lugs Center the Washer in the Knockout

Rohn Knockout Reducer

For reducing Knockouts in Outlet Boxes, Cabinets, etc.

Rohn Knockout Reducer is a practical fitting for reducing the knockouts in outlet boxes, cabinets, etc.

This fitting makes it possible to reduce knockouts for use with smaller size conduits or other fittings.

This affords a more flexible conduit system and makes a more mechanical and workmanlike job. The ease with which installation is made insures a labor saving of four or five times the price of the fitting. Saves duplication of stock.

Buy boxes with $\frac{3}{4}$ " knockouts and with these reducers you are prepared for any $\frac{3}{4}$ " or $\frac{1}{2}$ " requirements. Boxes with $\frac{3}{4}$ " knockouts cost no more than $\frac{1}{2}$ ".

Buy cabinets with 1" knockouts and use $\frac{1}{2}$ " or $\frac{3}{4}$ " reducers for the smaller knockouts.

You can see the great flexibility by adopting the Rohn System.

Two washers are used per knockout. One on the inside and one on the outside of box.

Galvanized has been adopted as standard finish on Gee-Vee Electrical Specialties.

For use on the end of conduit containing lead covered or signal wire. Plenty of room for the wires; furnishes good ventilation. Galvanized and has brass screws. Can be applied after the wires are drawn in and connected up. Pipe does not have to be threaded. Galvanized finish.

Another form of the standard Pipe Cap, made especially for horizontal services. Only two brass screws to manipulate and a screw driver is the only tool needed. Can be used to advantage with signal wires and lead covered cable. Galvanized finish.

GEE VEE Weather Cap, N. E. C. S.

The Weather Cap is made of sheet metal, galvanized finish, with an aluminum cover.

The frame portion screws to end of conduit; the insulator, either two or three hole, being held in place without screws. This eliminates the loss of screws.

Cover held on by two brass screws that are burred over on the ends and are always in place.

GEE VEE Endo

The Endo is a new terminal fitting small in size, neat in appearance and thoroughly galvanized. Can be securely applied without use of tools. There are no parts to become separated or lost, and no projections to interfere; does not have to be taken apart to install.

To Apply—The wires are simply passed through the insulator which does not turn, and the collar is then screwed by hand on the thread end of the conduit. The neat design furnishes a cushion for the porcelain and it is not easily broken, even when a wrench is applied.

GEE VEE Aluminum Service Elbow, N. E. C. S.

Allows the conduit to lie close to the surface—that feature so much desired. It allows a straight pull for drawing in wires in both conduits. The cover is weather proof without the use of a gasket. Not necessary to take out screws to remove cover. Clean cut threads gauged to standard are provided. To eliminate breakage due to conduits being slightly out of alignment, for lightness and ease in manipulation, and to provide a fitting that will resist corrosion, sizes 1/2, 3/4 and 1" are made of aluminum, larger sizes made of cast iron, galvanized, with aluminum cover.

High Class Conduit Tools**AUSTIN Adjustable Conduit Hickey**

The Austin has two unique features which put it far ahead of the old style Hickey—i. e., the adjustable feature and the notches in the ends of the jaws. (See illustration.)

Simply by loosening the nut and turning the handle, a new position may be obtained and an awkward situation overcome. This practically makes it a ratchet tool.

The non-slip notches in the end of the jaws prevent the tool from slipping off the conduit, preventing the resultant bumped shins, smashed knuckles, lost temper, lost time, etc. Packed in individual cartons for ready handling, storing and display.

No. 20

Catalog No.	SIZE	Standard Package	Weight, Lbs. Each	List Price Each
20	½ inch	10	2½	\$2.00
21	¾ inch	5	3¼	2.30

AUSTIN "Bull Dog" Conduit Hickey

The "BULL DOG" grips the conduit and won't slip. It will bend in that awkward position and will not dent the pipe.

Features: The patented non-slip notches; the reinforced jaws; and the small handy size, just large enough to do the work and still small enough to fit the tool kit.

The end is threaded to take a one-inch pipe coupling. Any scrap length of one-inch pipe can be screwed in for a handle. Should the handle break simply unscrew the coupling. Packed in individual cartons for ready handling, storing and display.

No. 30

Catalog No.	SIZE	Standard Package	Weight, Lbs. Each	List Price Each
30	½ inch	10	1½	\$1.70
31	¾ inch	5	2	2.00

"Lakin" Hickey

For short bends in awkward positions. Will not kink the pipe. The threaded end fits a standard one-inch pipe coupling. Screw a piece of one-inch pipe in the other end of coupling. Never necessary to throw away the Hickey—even if the handle breaks off. Simply unscrew the coupling.

No. 40

Catalog No.	SIZE	Standard Package	Weight, Lbs. Each	List Price Each
40	½ inch	10	1¾	\$1.75
41	¾ inch	5	2	2.25

"BOSS" Self-Adjusting Conduit Hickey

The "BOSS" will bend conduit from ¾-inch to 1-inch without any adjustment on the part of the workman.

The harder the pull the harder the "BOSS" grips the pipe. It also makes for maximum accuracy in bending the pipe at the exact point decided on.

The "BOSS" may be used on the floor, with bench vise or with pipe standard at side of bench.

No. 50

Catalog No.	SIZE	Standard Package	Weight, Lbs. Each	List Price Each
50	¾ to 1 inch	12	11	\$7.00

"BOSS" Hickey can be assorted with Rex Conduit Benders Nos. 1, 2 and 3 to make up a standard package quantity.

AUSTIN Lightning Conduit Reamer

The Austin Lightning Reamer breaks up the chips and plows its way right into the burr. It cuts deep and does not bind—that's the difference between the "Spiral" and the straight "Flute." It's a bear for work.

Styles Nos. 1 and 2

Nos. 1 and 2 Rex Conduit Bender

With this tool you can bend conduit so that it will follow the most intricate outlines and fit snugly and smoothly.

The wheels are adjustable.

No. 1. For 1¼-inch and smaller conduits.

No. 2. For 1 to 2-inch conduits.

Catalog No.	DESCRIPTION	Standard Package	Weight, Lbs. Each	List Price Each
1	For ¾ to 1¼-inch Conduit.....	12	17	\$ 6.50
2	For 1 to 2-inch Conduit.....	12	50	12.00

Rex Conduit Benders can be assorted with Boss Hickey to make up a standard package quantity.

No. 3 Rex Conduit Bender

Can be mounted flat on a bench or fastened to a post on the job. Both "nigger's heel" and bending wheels are adjustable to make any kind of a bend.

The scientifically shaped wheels will take 1¼-inch and smaller conduits and will not flatten or kink the pipe. The bending point is always in clear view of the workman during the operation.

Note the Slots for Adjustment

No. 35

Standard Conduit Elbow Former

For ½ and ¾-inch Conduit

This is not merely a pipe bender, it is a practicable conduit elbow former which forms standard shaped elbows perfectly and accurately, exactly where you want them. It will save time over old methods and save material by eliminating the waste of pipe.

Catalog No.	DESCRIPTION	Standard Package	Weight, Lbs. Each	List Price Each
35	For ½ and ¾-inch Conduit.....	2	35	\$30.00

BX Hack Saw for Armored Cables, Etc.

Saves 75% Breakage—50% Labor

Particularly designed for cutting armored cables although it has many other practical uses, such as for underground work in cutting lead sheathing, for cleaning between segments of commutators, sawing through worn bronze bushings and for sawing thin fixture tubing, etc. Cut single strip armor with front end or use heel for cutting double strip or wire. Can be guided with less danger of cutting hand as sides are strong and little of the blade exposed. This feature also prevents

accidental cutting into insulation of wire when cutting through armor and therefore, lessens chance of short circuits where cable enters boxes. The 8-inch special slotted blades allow adjustment for deeper cuts and for quick replacing. The blade is held by compression between the two steel sides of the saw with no tension which causes breakage, saving at least 75% in blades over the old-fashioned hack saw. Being light in weight, small and compact, makes work easier and tool kits lighter. Saves 50% in labor.

Catalog No.	DESCRIPTION	Length of Blade	Standard Package	Weight, Lbs. Standard Package	List Price
80	BX Hack Saw Complete with Special Slotted Blade	8"	12	9	\$1.50 ea.
80-B	Special Slotted BX Blades only	8"	Gross	4	1.00 doz.

Henderson's Boring Machine

The only practicable machine for boring holes through joists from floor. Has ball-bearings and universal bit holder; is built so as to telescope to four and one-half feet and extend to twelve feet; made of bicycle tubing; nickel plated and polished.

Telescoped No. 88

Cat. No.	DESCRIPTION	Standard Package	Weight, Lbs. Each	List Price Each
88	Henderson Boring Machine	1	18	\$25.00

"Gem" Lamp Cord Adjuster

"Simple as adjusting your window shade" is the way one user sums up the simplicity of the GEM Lamp Cord Adjuster.

He hit the nail on the head for it works like a shade and is so simple and strong that it cannot go wrong. A gentle pull on the lamp cord places the lamp where it is wanted. A little jerk releases the dog and the lamp goes up out of the way like a window shade.

In every warehouse, stock-room, factory, store-room, engine-room, machine-shop, garage, or in fact, any place where a drop cord is used, there is a big demand for an inexpensive, practical lamp cord adjuster.

The GEM is absolutely indispensable to the modern manufacturers. No rewiring. It is attached without removing the socket or changing the wiring in any way.

It can be used with any style or size of cord. There is no wear on insulation and no strain on connections.

Approved by the Underwriters' Laboratories, Inc.

The GEM is attached to the ceiling entirely independent of the wiring, directly over the spot where the light is wanted. The lamp cord is connected to the Adjuster through an insulator by means of a heavy cord. The heavy cord is wound on a sheet metal drum by a powerful spring enclosed in the drum. The drum has three brass dogs that catch on a shoulder in the steel hanger.

Packed in individual cartons; 5 cartons constitute a unit package; 10 unit packages one standard package.

Cat. No.	DESCRIPTION	Unit Package	Standard Package	Weight, Pounds Standard Package	List Price Each
1	"Gem" Lamp Cord Adjuster	10	50	23	\$1.50

AUSTIN No. 55 Type "H" Loom Lock

National Electric Code Standard

The AUSTIN No. 55 Type "H" LOOM LOCK is used to securely hold Non-Metallic Flexible Conduit (Loom) in the knockouts of metal cabinets, cut-out boxes, junction and switch boxes as per the code requirements. Rule No. 502 (h) of the new 1923 code reads "Approved outlet boxes or plates shall be installed at all outlets and the flexible tubing shall extend from the last knob into and be 'secured' to such boxes or plates." To comply with this ruling there is nothing better than the No. 55 Type H Loom Lock.

Easy and simple to install. Not a fastener, but a lock that positively holds the loom in place and will not permit it to be pulled away from the knockout.

To install, place loom into knockout, pull wire into position, then grip one leg of the "LOOM LOCK" with ordinary pliers and shove it between the loom and edge of knockout until the little grooves center into place. It is then locked and will not work loose by vibration or by carelessness on the part of lather, plasterer or other mechanics after the electrician has left the job.

Can be installed from outside or inside of box. Packed in attractive, convenient cartons of 100.

Catalog No.	Type	Unit Package	Standard Package	Weight, Lbs. per 1000	List Price per 1000

AUSTIN Meter Books, Sheets, Seals and Sealing Tools

Austin Meter Books are equipped with the celebrated I. P. adjustable nickel-plated binder, which permits the book to be opened flat at any point for the removal or insertion of sheets without in any manner disturbing the other sheets. The standard size is cloth bound with leather backs and corners, and takes the Austin standard size sheets, $8\frac{1}{2} \times 5\frac{1}{2}$ inches. The pocket edition is made up of flexible leather and takes sheets measuring $5\frac{1}{2} \times 3\frac{1}{2}$ inches, exactly the size of the cut shown on this page.

Austin Meter Seals are made of four-strand No. 30 soft tinned wire in three sizes: 4, 6 and 8 inches, specially designed for sealing meters.

The meter sealing tool weighs but 14 ounces, and is only 6½ inches in length, therefore, easy to carry in the pocket and yet, the specially designed compound lever makes it one of the most practical tools of its kind on the market. Can be furnished with engraved letters or numbers if specified.

No. 888

These tools are made for use with
AUSTIN meter seals only.
